

Oyster Fact Sheet

OUR FARMS

All of our oyster farms are in export approved waters meeting strict Australian and International food quarantine guidelines.

Our export product is packed in our own approved packing facility with strict QA and HACCP programs that control our entire domestic and export processing and packing.

OUR QUALITY ASSURANCE

Tasmania Oyster Co. has adopted an internationally accepted Quality Assurance program for the reduction of food safety risks of shellfish consumption. This program is carried out by Shellfish Market Access Program (ShellMAP) allowing Tasmanian oysters to enjoy an enviable food safety record.

All our harvest areas are monitored to record the salinity levels after rainfall.

OUR SUSTAINABILITY

We are certified sustainable by the World Sustainability Organisation having achieved our Friend of the Sea certification.

We are committed to supplying superior Tasmanian oysters through our wholesale, retail and export channels.

We pride ourselves with an exceptional clean, green environment and organic practices, right from our own hatchery through to our growing, harvesting and packing environments, direct from our farms to you.

The sustainable management of Australia's southern coastline is of great importance to us. We are totally committed to working with the natural environment, for long term sustainability of oyster farming in Australia.
